

Double Lines to Walls for VectorWorks®

[Back to Products](#)[Download](#)[Add to Cart](#)[View Cart](#)

Price

\$20.00

System Requirements

This product requires VectorWorks 2008 or above.

Installation

For information on how to install plug-ins for VectorWorks, please see the VectorWiki article entitled [Installing Plug-ins](#).

Description

This plug-in will convert double lines to walls. So if you have to import a drawing from another CAD application that doesn't have wall objects, and you wind up with nothing but a bunch of parallel lines in your drawing, use this plug-in to convert it all to walls. Once the walls have been created, any symbols falling inside wall breaks will result in the wall breaks being healed and the symbols being inserted into the walls.

Prior to using this feature, just make sure that all of the double lines are on the active layer. Then, all of the newly created walls will be placed inside a group on the active layer.
